Rear Anti roll bar Mount Strengthening Rear guard spacers			

Rear Anti Roll bar mounting Strengthening is now permitted and example of which is set out below. This is due to the fact that we have seen cracking around the mounting points especially whilst using the bar in its stiffest position.

Rear Guard

In order to protect the gearbox casing it will be permitted to space down the rear of the guard using a spacer or spacers of a maximum total of 25 mm. These spacers are free for you to manufacture from Aluminium or Steel. The diameter is of your own choice.

The purpose of the spacer must be only for the use of increasing the gap between the guard and the gearbox case.
